

StonewaterControlSystems

Real-time Monitoring and Data Services

Stonewater Control Systems offers commercial and industrial customers a powerful tool to manage energy costs, monitor critical systems and implement best practices.

Stonewater's **energy1st** service creates new revenue streams and enhances customer relationships by creating value-added data and energy management services.

Stonewater's turnkey application gives managers real-time insight into critical data from multiple distributed sites. Stonewater's **energy1st** provides executives an expanded view of their enterprise by displaying data from divergent systems such as lighting, HVAC and air quality.

Companies are given the ability to implement and maintain an energy management strategy by flexibly aggregating and comparing information, alarming and automating equipment control. Through centralized management, companies save money by reducing energy consumption,

avoiding critical outages and lowering labor costs.

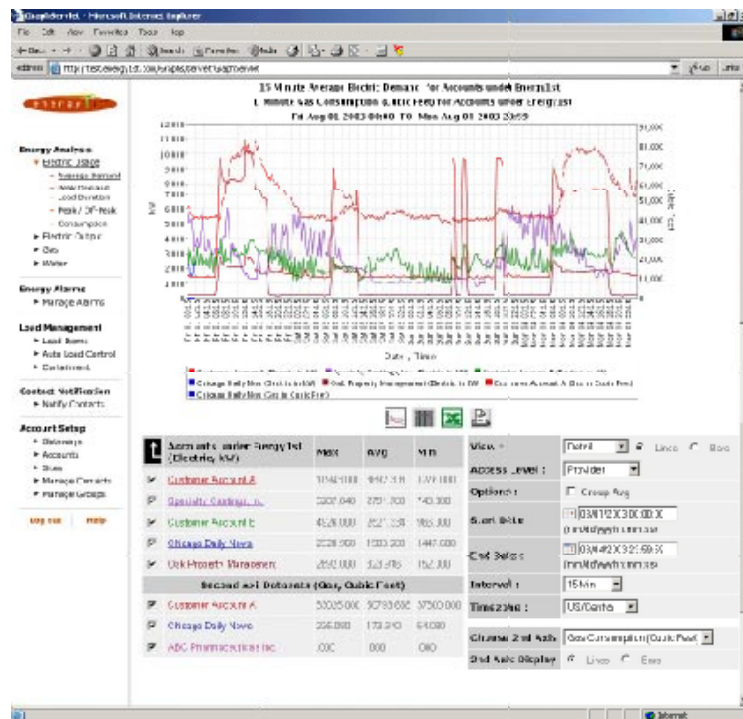

Employees access data for any monitored site 24/7 from any location with Internet access. Key personnel are notified of alarm violations via phone, fax, email or pda.

Responses are monitored and recorded, helping to

ensure specified actions are taken.

Stonewater's system can be delivered on an ASP basis, reducing the need for internal information technology resources.

Stonewater's technology makes the promise of "smart" buildings a reality . . . today.

At Stonewater's energy1st website companies can flexibly aggregate and compare information as well as set alarms and automate equipment control.
